

AKS Forum of School of Management Organized a Workshop on “Innate Life Interpretive Analysis”

AKS (The forum of undergraduate students of School of Management, BBD University) conducted a workshop on March 31, 2017 on “Innate Life Interpretive Analysis” (ILIA), led by Mr. Farke Azam Khan, Founder and Managing Consultant- InnatePro.

ILIA is a unique empirically proven technique to measure intrinsic talents and biopsychological potential of a person. It assimilates knowledge of various sciences like: Anthropology, embryology, dermatoglyphics, psychology and medical sciences.

The process involves study of finger print pattern and ridge count of all fingers through a digital scanner. The findings discover that how each person, parents, educators and students is uniquely gifted, but cannot always clearly identify all their talents. This lack of knowledge inhibits them from actualizing their potential.

The workshop had many takeaways for both students and faculties.
